

DON'T BE LEFT IN THE DARK

Pool lighting has negative effects in work environments. Reap the benefits when you flip the switch to LED.

ENERGY EFFICIENCY

LED has incredible lumens per watt, meaning you get more light with less energy. The EZ LED will save up to 68%, simply by changing bulbs.

EMPLOYEE PRODUCTIVITY

Spend more time working and less time waiting for the lights to turn on. LED lighting has **INSTANT ON AND INSTANT OFF** capabilities, so no waiting after a power disruption. Additionally, LEDs have longer life, typically averaging 50,000+ hours. That's 3-4x longer than a MH or HPS lamp, so employees spend less time changing lamps.

FACILITY EFFICIENCY

Lower HVAC costs when you upgrade to LED bulbs. THE EZ LED RUNS 10-14x cooler than traditional MH and HPS fixtures so less stress on your HVAC system.

SAFER WORK ENVIRONMENT

Metal halide (MH) and High Pressure Sodium (HPS) lamps contain mercury and must be disposed of properly. These lamps have also been known to expose and increases the risk of fire. Most insurance companies offer lower rates once you remove these from your facility.

IMPROVED QUALITY CONTROL

With brighter, better lighting, LED improves visibility with a much higher Color Rendering Index (CRI). This means you get a truer daylight color that can lead to increased productivity and lower reject rates.

LIGHT WHERE YOU WANT IT & WHEN

Illuminate the space where light is needed most to prevent wasted energy and increase savings by using dimmers and sensors.

Additionally, LED lighting is directional. Shine the light where you want it to go. Special optics allow for customizing beam angle and light spread.
